Reddy_2017 · Taxon plot

19 of 15,878 sequences masked (0.1%)

each point represents a single sequence (a single locus in a single taxon), diagonal line is where the observed is the same as the expected divergence, dashed lines are the thresholds used for defining outliers (2x above, 1/3 below) · the 100 most masked of 235 taxa are shown

not masked · fails 0 of 5

sequences masked in the taxon

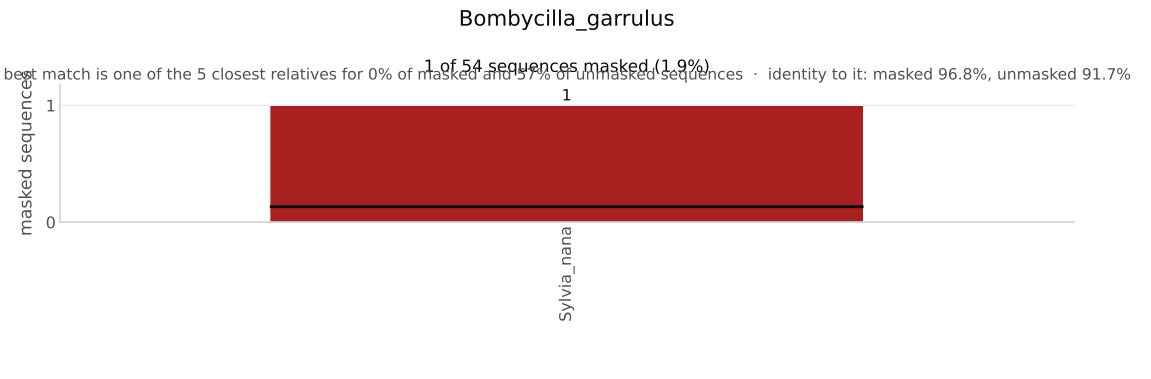

Reddy_2017 · Best match of each masked sequence

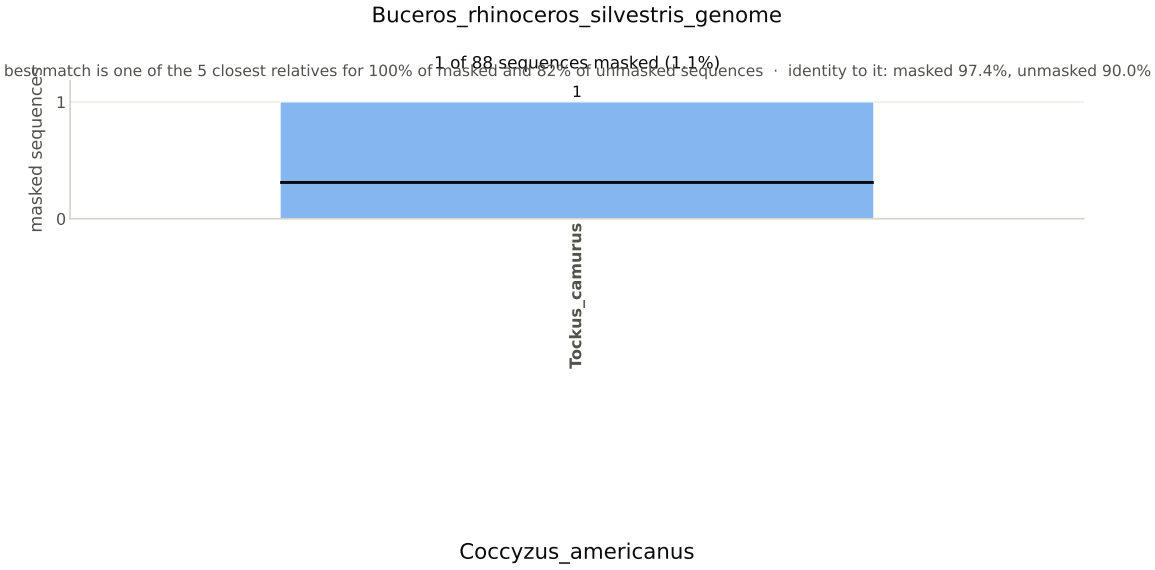

19 of 15,878 sequences masked (0.1%)

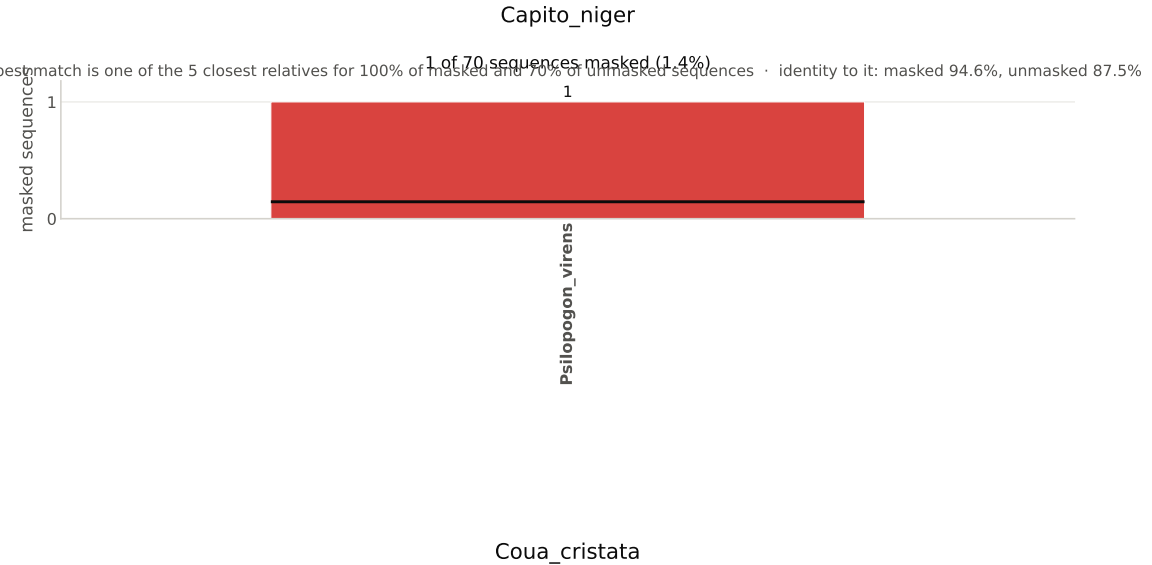

the 10 most masked taxa; each masked sequence is matched against every other taxon at its locus (identity over the masked sequence's sites, a site the other taxon lacks counting as a mismatch; ties to the closest relative genome-wide); bars count masked sequences by the taxon they match best; the tick is the count expected if they matched like the taxon's unmasked sequences; bold: the 5 closest relatives genome-wide

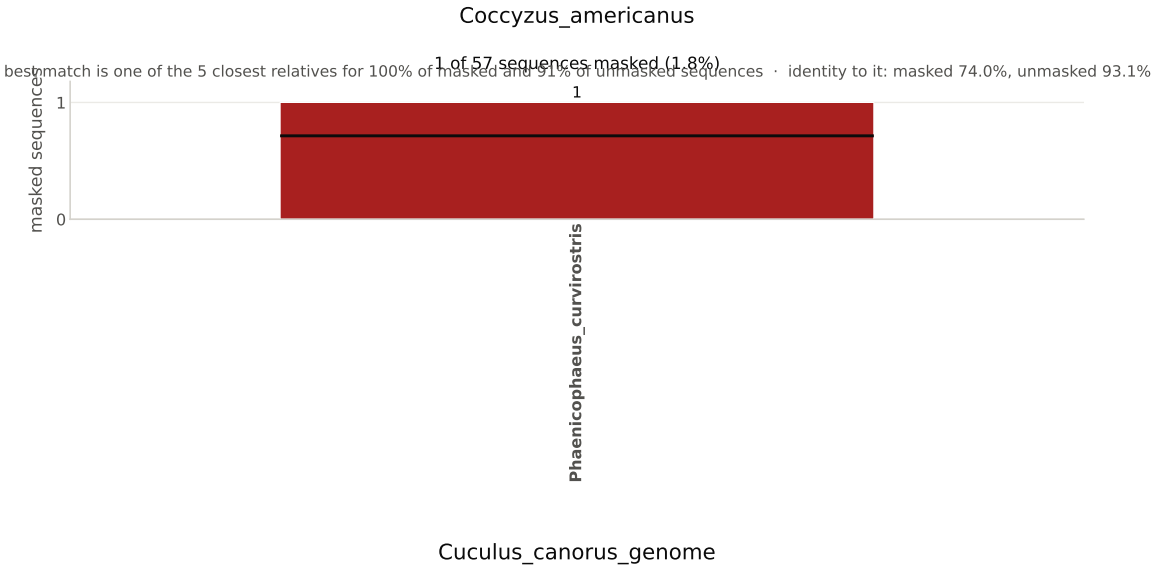

masked, too divergent · fails 3 of 5
masked, too divergent · fails 4 of 5
masked, too divergent · fails 5 of 5
masked, too similar · 1 pair
masked, too similar · 2 pairs
masked, too similar · 3+ pairs
count expected if the masked sequences matched like the unmasked ones

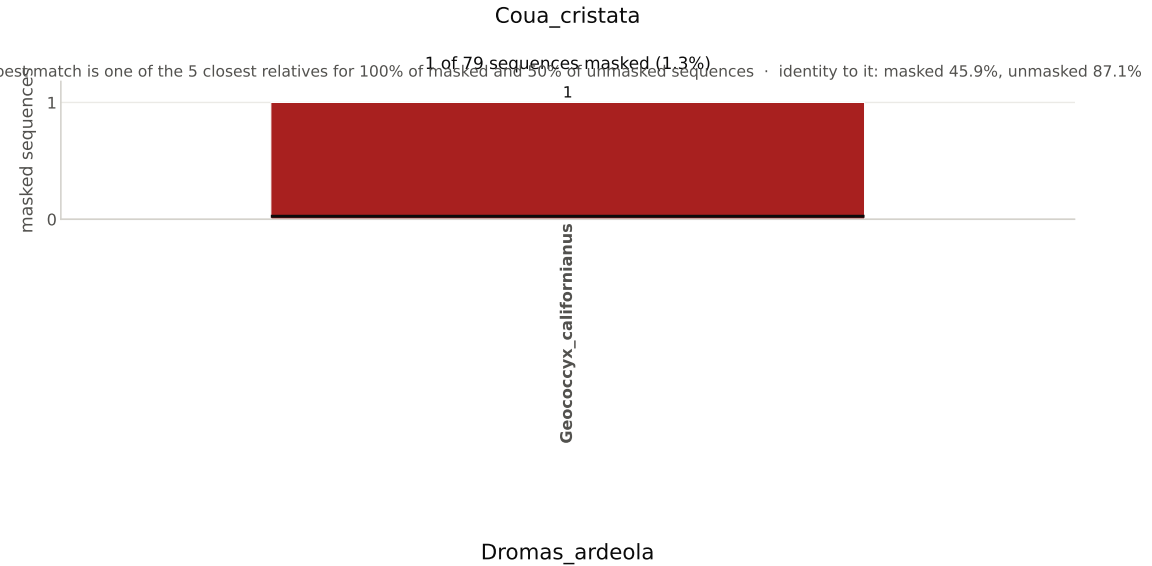

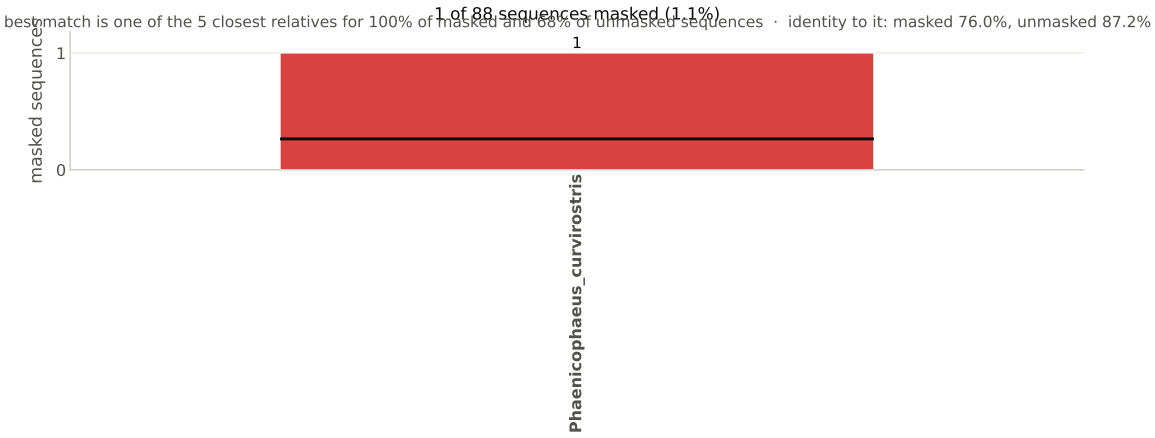

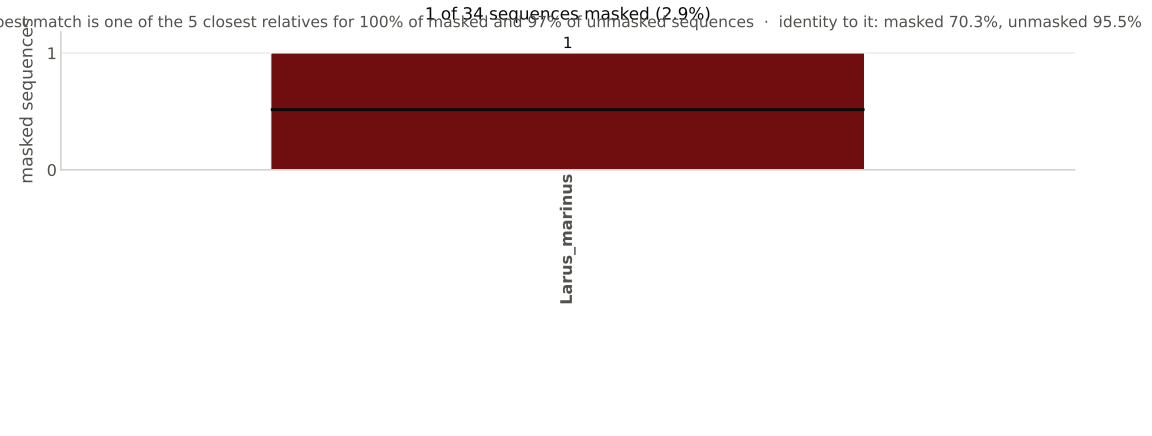

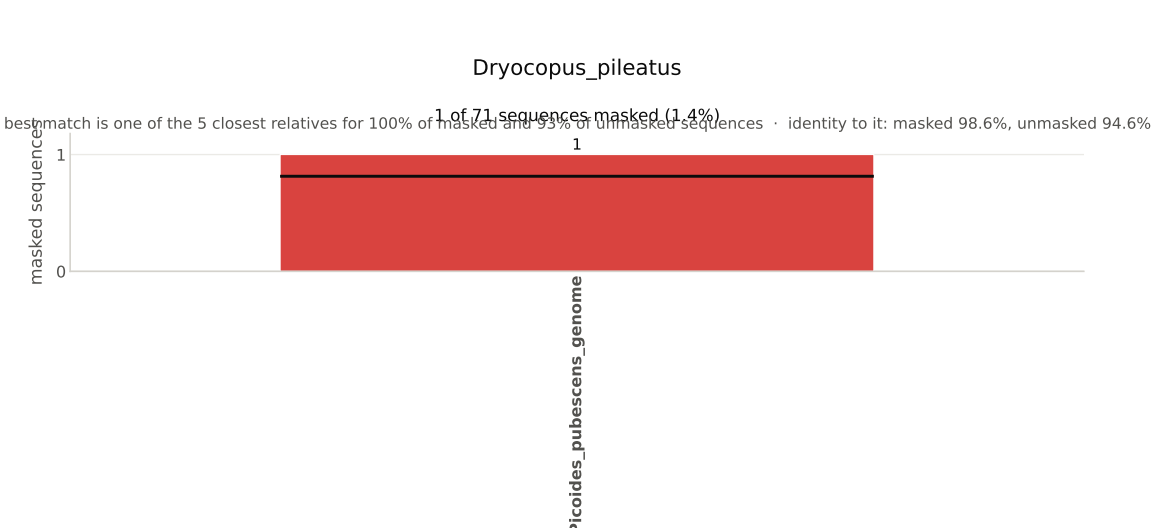

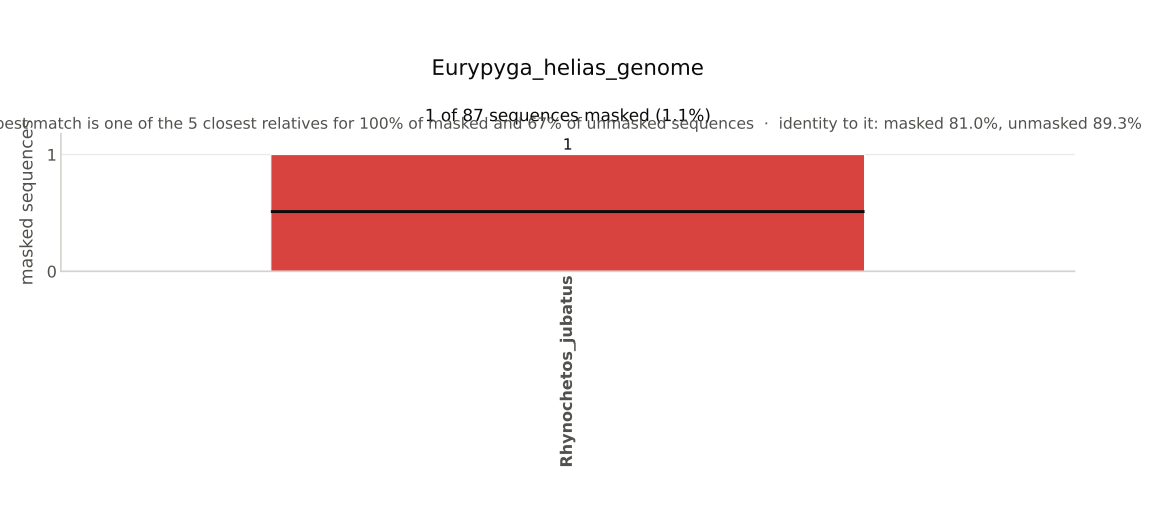

Reddy_2017 · Residuals by taxon
19 of 15,878 sequences masked (0.1%) · the 100 most masked of 235 taxa
each point is one sequence; triangles are masked (reds too divergent, blues too similar), grey are the taxon's other sequences
sequences identical to their comparators are counted in the row label, not drawn; axis linear near 0, logarithmic far out

Reddy_2017 · Residuals by locus
19 of 15,878 sequences masked (0.1%) · all 88 loci
each point is one sequence; triangles are masked (reds too divergent, blues too similar), grey are the locus's other sequences
sequences identical to their comparators are counted in the row label, not drawn; axis linear near 0, logarithmic far out; shaded = where a saturated sequence would land
