Cannon_2016_aa · Taxon plot

78 of 13,304 sequences masked (0.6%)

each point represents a single sequence (a single locus in a single taxon), diagonal line is where the observed is the same as the expected divergence, dashed lines are the thresholds used for defining outliers (2x above, 1/3 below)

by locus · 47 of 212 loci have a masked sequence

by taxon · 44 of 78 taxa have a masked sequence

Cannon_2016_aa · Best match of each masked sequence

78 of 13,304 sequences masked (0.6%)

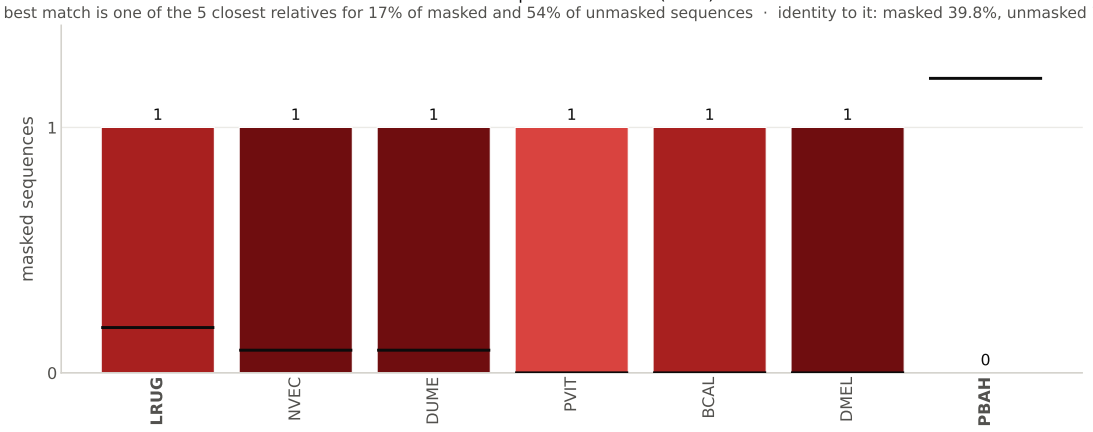

the 10 most masked taxa; each masked sequence is matched against every other taxon at its locus (identity over the masked sequence's sites, a site the other taxon lacks counting as a mismatch; ties to the closest relative genome-wide); bars count masked sequences by the taxon they match best; the tick is the count expected if they matched like the taxon's unmasked sequences; bold: the 5 closest relatives genome-wide
