805 of 229,540 sequences masked (0.4%)

each point represents a single sequence (a single locus in a single taxon), diagonal line is where the observed is the same as the expected divergence, dashed lines are the thresholds used for defining outliers (2x above, 1/3 below)

Chen_2015 · Best match of each masked sequence

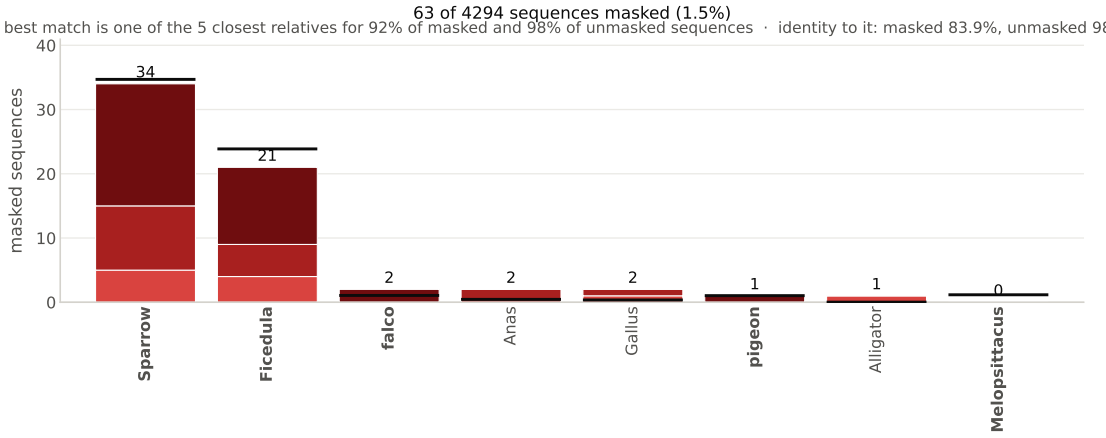

805 of 229,540 sequences masked (0.4%)

the 10 most masked taxa; each masked sequence is matched against every other taxon at its locus (identity over the masked sequence's sites, a site the other taxon lacks counting as a mismatch; ties to the closest relative genome-wide); bars count masked sequences by the taxon they match best; the tick is the count expected if they matched like the taxon's unmasked sequences; bold: the 5 closest relatives genome-wide
