Meiklejohn_2016 · Taxon plot

11 of 26,946 sequences masked (0.0%)

each point represents a single sequence (a single locus in a single taxon), diagonal line is where the observed is the same as the expected divergence, dashed lines are the thresholds used for defining outliers (2x above, 1/3 below)

Meiklejohn_2016 · Best match of each masked sequence

11 of 26,946 sequences masked (0.0%)

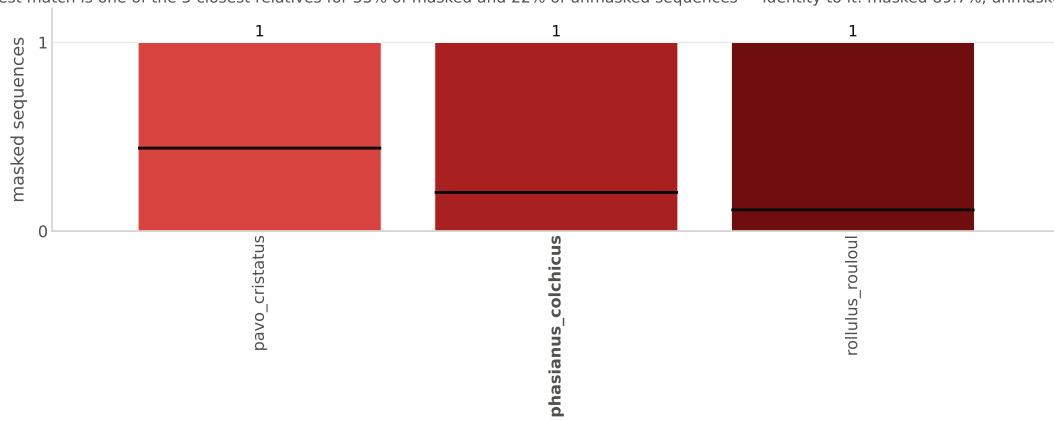

the 6 most masked taxa; each masked sequence is matched against every other taxon at its locus (identity over the masked sequence's sites, a site the other taxon lacks counting as a mismatch; ties to the closest relative genome-wide); bars count masked sequences by the taxon they match best; the tick is the count expected if they matched like the taxon's unmasked sequences; bold: the 5 closest relatives genome-wide
