the 10 most masked taxa; each masked sequence is matched against every other taxon at its locus (identity over the masked sequence's sites, a site the other taxon lacks counting as a mismatch; ties to the closest relative genome-wide); bars count masked sequences by the taxon they match best; the tick is the count expected if they matched like the taxon's unmasked sequences; bold: the 5 closest relatives genome-wide

473 of 729,289 sequences masked (0.1%) · the 100 most masked of 343 taxa
each point is one sequence; triangles are masked (reds too divergent, blues too similar), grey are the taxon's other sequences
sequences identical to their comparators are counted in the row label, not drawn; axis linear near 0, logarithmic far out

Shen_2018 · Residuals by locus
473 of 729,289 sequences masked (0.1%) · the 100 most masked of 2408 loci
each point is one sequence; triangles are masked (reds too divergent, blues too similar), grey are the locus's other sequences
sequences identical to their comparators are counted in the row label, not drawn; axis linear near 0, logarithmic far out; shaded = where a saturated sequence would land
