Leache_2015 · Best match of each masked sequence

8 of 6,183 sequences masked (0.1%)

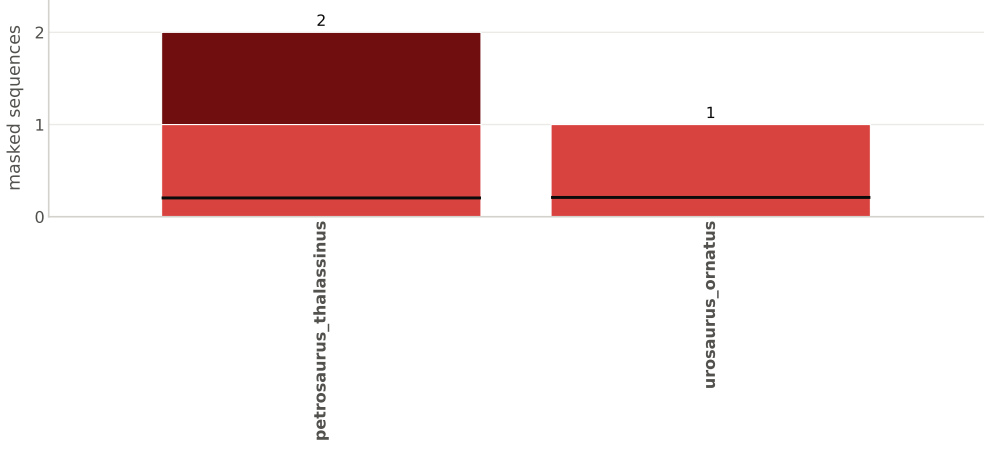

the 4 most masked taxa; each masked sequence is matched against every other taxon at its locus (identity over the masked sequence's sites, a site the other taxon lacks counting as a mismatch; ties to the closest relative genome-wide); bars count masked sequences by the taxon they match best; the tick is the count expected if they matched like the taxon's unmasked sequences; bold: the 5 closest relatives genome-wide
