Rightmyer_2013 · Taxon plot

1 of 450 sequences masked (0.2%)

each point represents a single sequence (a single locus in a single taxon), diagonal line is where the observed is the same as the expected divergence

observed divergence of the cell, median over its comparators (%)

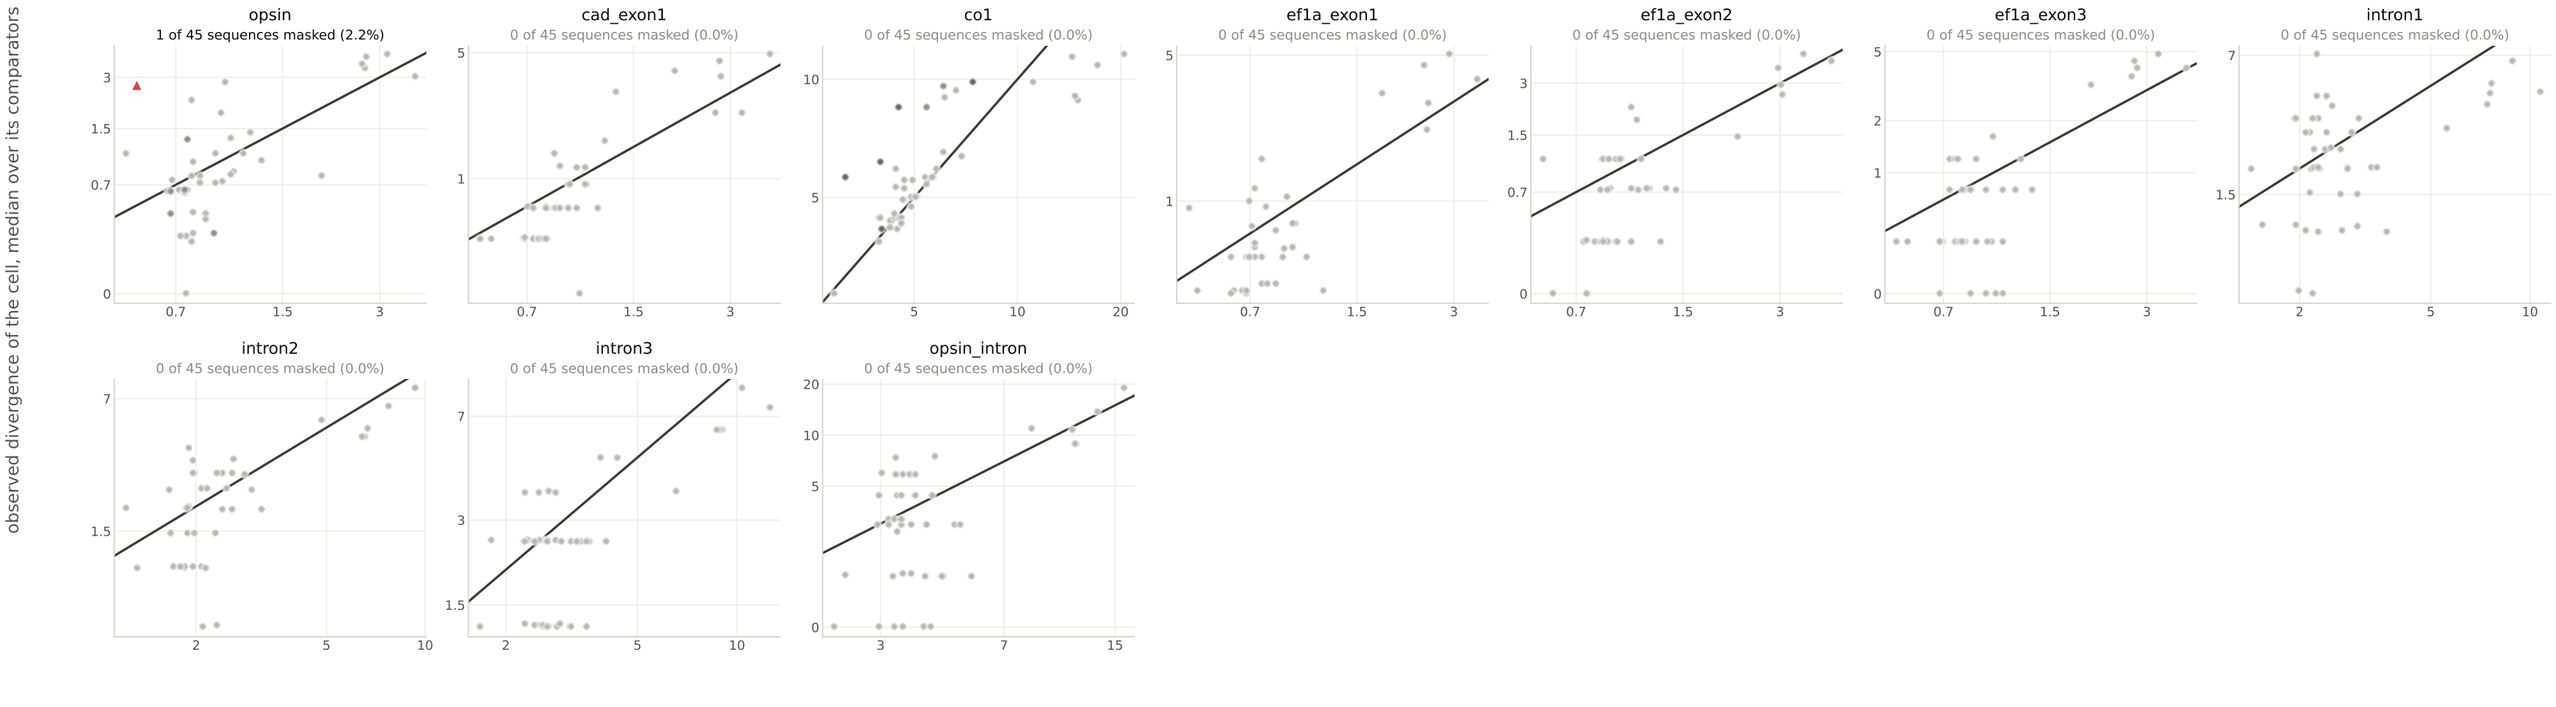

expected divergence of the cell, median over its comparators (%)

1 of 450 sequences masked (0.2%)

Rightmyer_2013 · Best match of each masked sequence

1 of 450 sequences masked (0.2%)

the 1 most masked taxa; each masked sequence is matched against every other taxon at its locus (identity over the masked sequence's sites, a site the other taxon lacks counting as a mismatch; ties to the closest relative genome-wide); bars count masked sequences by the taxon they match best; the tick is the count expected if they matched like the taxon's unmasked sequences; bold: the 5 closest relatives genome-wide

Rightmyer_2013 · Residuals by taxon
1 of 450 sequences masked (0.2%) · all 45 taxa
each point is one sequence; triangles are masked (reds too divergent, blues too similar), grey are the taxon's other sequences
sequences identical to their comparators are counted in the row label, not drawn; axis linear near 0, logarithmic far out
