Borowiec_2015 · Best match of each masked sequence

38 of 33,672 sequences masked (0.1%)

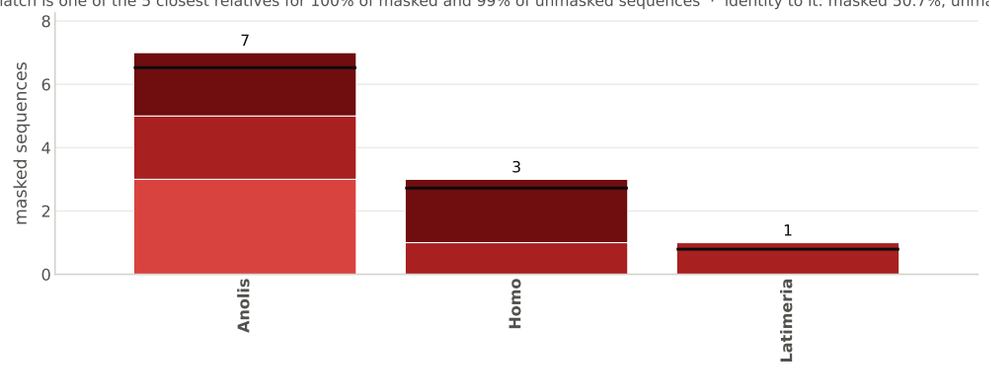

the 7 most masked taxa; a sequence's best match is the taxon closest to it at its locus, per-site divergence compared on the same sites (identity over the sites the pair shares; ties to the closest relative genome-wide); bars count masked sequences by the taxon they match best; the tick is the count expected if they matched like the taxon's unmasked sequences; bold: the 5 closest relatives genome-wide
