Broughton_2013 · Taxon plot

1 of 707 sequences masked (0.1%)

each point represents a single sequence (a single locus in a single taxon), diagonal line is where the observed is the same as the expected divergence

Broughton_2013 · Number of sequences masked per locus and per taxon

1 of 707 sequences masked (0.1%)

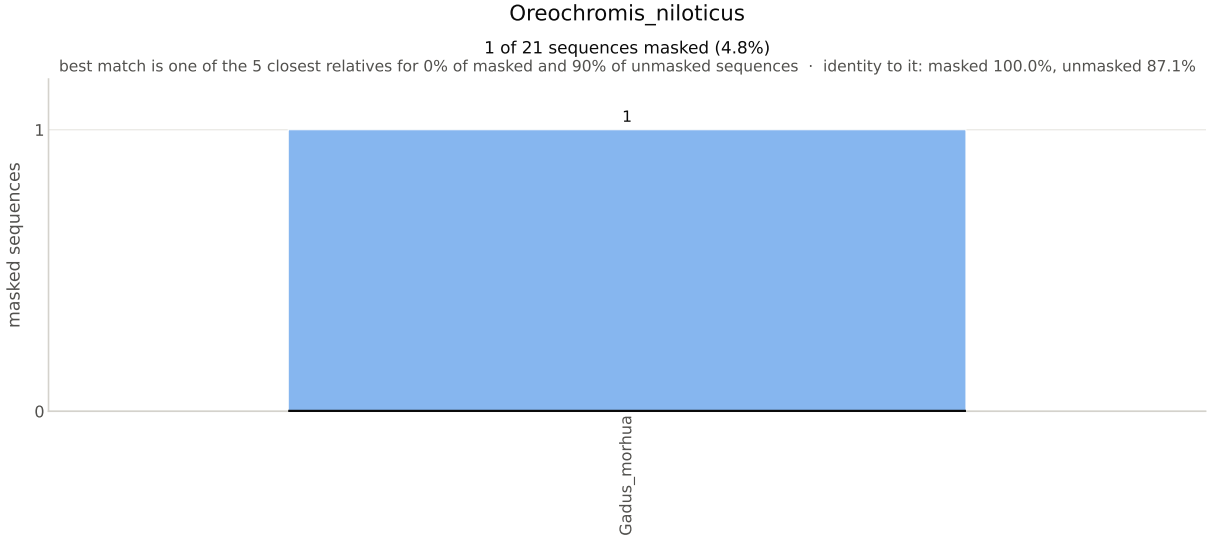

Broughton_2013 · Best match of each masked sequence

1 of 707 sequences masked (0.1%)

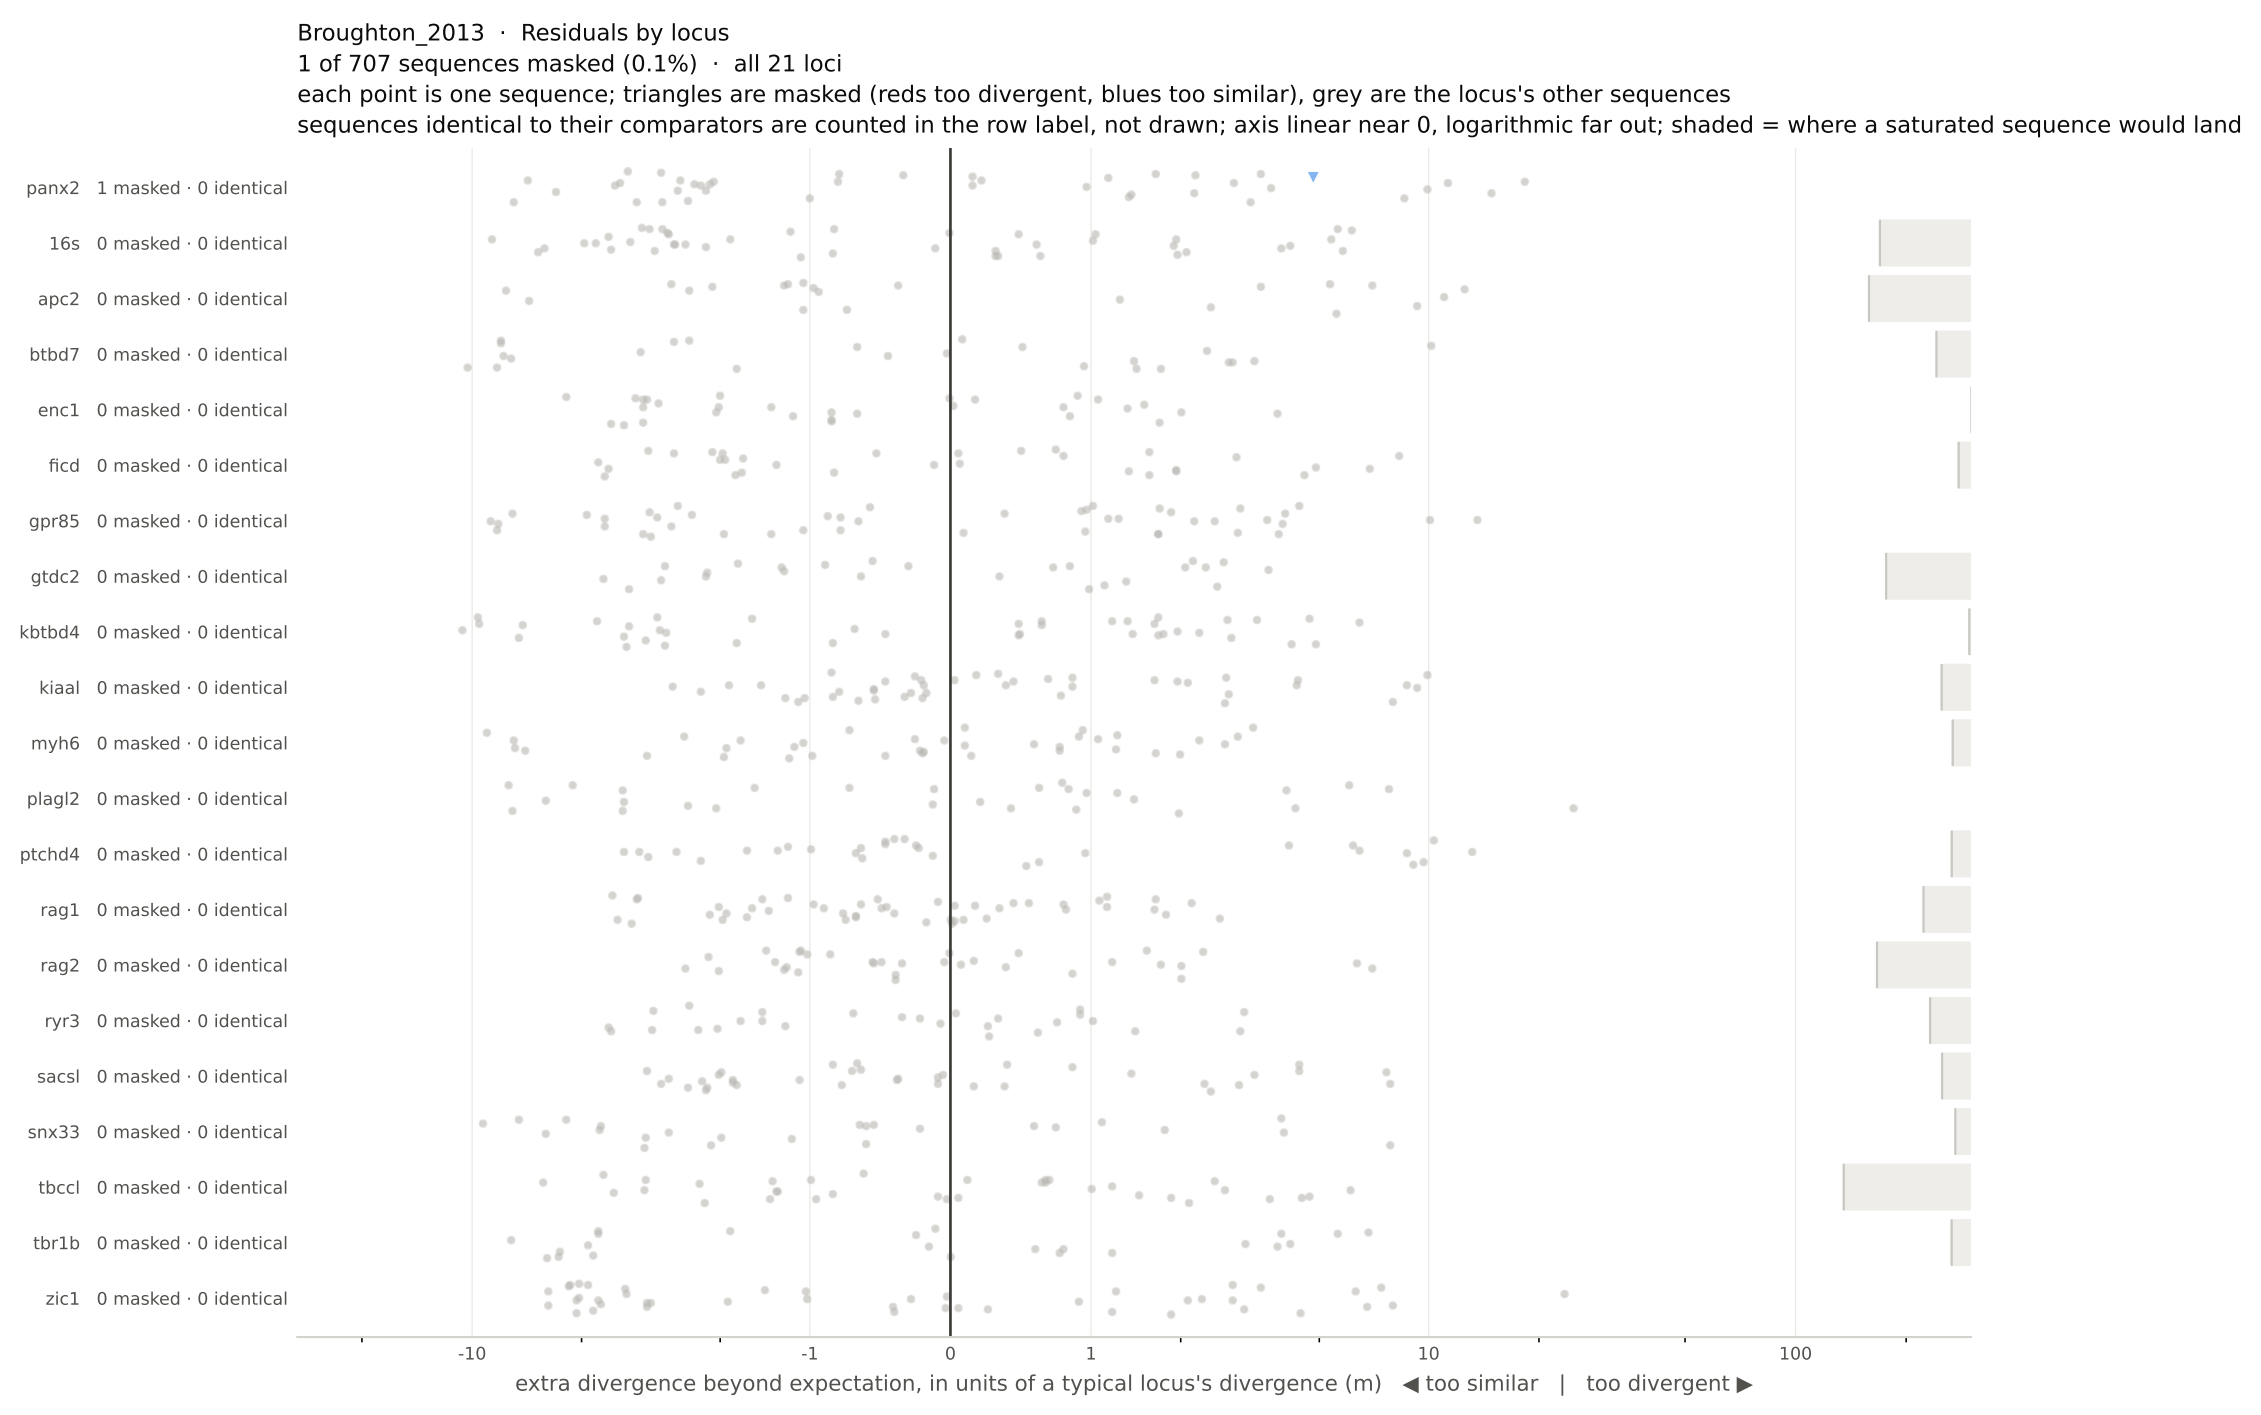

the 1 most masked taxa; a sequence's best match is the taxon closest to it at its locus, per-site divergence compared on the same sites (identity over the sites the pair shares; ties to the closest relative genome-wide); bars count masked sequences by the taxon they match best; the tick is the count expected if they matched like the taxon's unmasked sequences; bold: the 5 closest relatives genome-wide

count expected if the masked sequences matched like the unmasked ones

Broughton_2013 · Residuals by taxon
1 of 707 sequences masked (0.1%) · all 48 taxa
each point is one sequence; triangles are masked (reds too divergent, blues too similar), grey are the taxon's other sequences
sequences identical to their comparators are counted in the row label, not drawn; axis linear near 0, logarithmic far out

Broughton_2013 · Residuals by locus
1 of 707 sequences masked (0.1%) · all 21 loci
each point is one sequence; triangles are masked (reds too divergent, blues too similar), grey are the locus's other sequences
sequences identical to their comparators are counted in the row label, not drawn; axis linear near 0, logarithmic far out; shaded = where a saturated sequence would land
