Oaks_2011 · Taxon plot

49 of 1,906 sequences masked (2.6%)

each point represents a single sequence (a single locus in a single taxon), diagonal line is where the observed is the same as the expected divergence

Oaks_2011 · Best match of each masked sequence

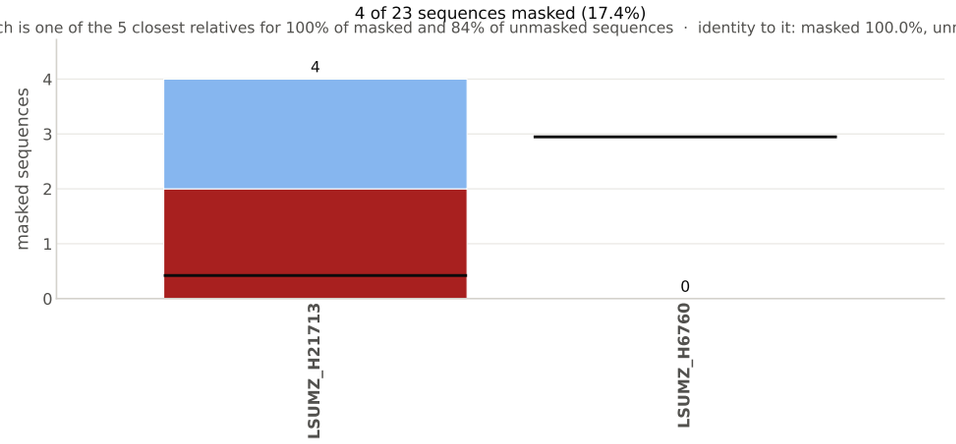

49 of 1,906 sequences masked (2.6%)

the 10 most masked taxa; a sequence's best match is the taxon closest to it at its locus, per-site divergence compared on the same sites (identity over the sites the pair shares; ties to the closest relative genome-wide); bars count masked sequences by the taxon they match best; the tick is the count expected if they matched like the taxon's unmasked sequences; bold: the 5 closest relatives genome-wide

Oaks_2011 · Residuals by taxon
49 of 1,906 sequences masked (2.6%) · all 79 taxa
each point is one sequence; triangles are masked (reds too divergent, blues too similar), grey are the taxon's other sequences
sequences identical to their comparators are counted in the row label, not drawn; axis linear near 0, logarithmic far out

Oaks_2011 · Residuals by locus
49 of 1,906 sequences masked (2.6%) · all 26 loci
each point is one sequence; triangles are masked (reds too divergent, blues too similar), grey are the locus's other sequences
sequences identical to their comparators are counted in the row label, not drawn; axis linear near 0, logarithmic far out; shaded = where a saturated sequence would land
