Prebus_2017 · Taxon plot

468 of 100,535 sequences masked (0.5%)

each point represents a single sequence (a single locus in a single taxon), diagonal line is where the observed is the same as the expected divergence

Prebus_2017 · Best match of each masked sequence

468 of 100,535 sequences masked (0.5%)

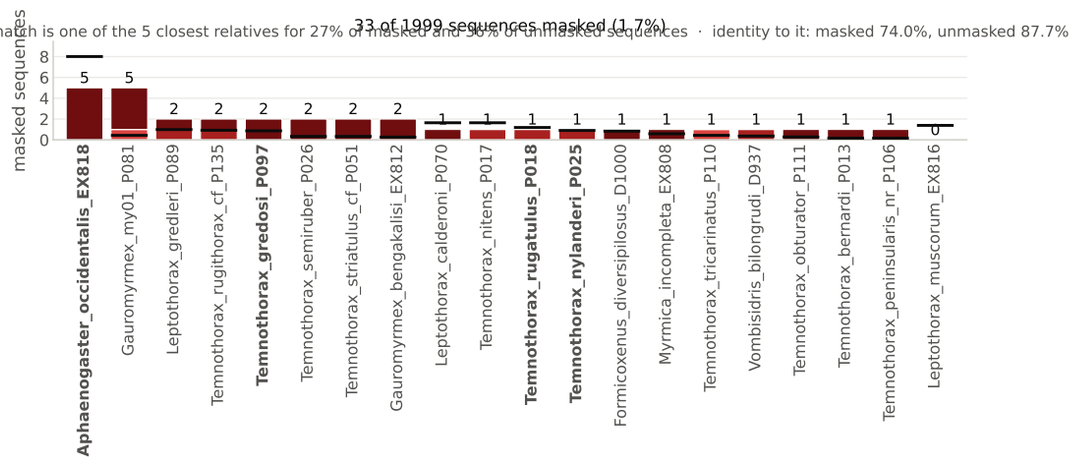

the 10 most masked taxa; a sequence's best match is the taxon closest to it at its locus, per-site divergence compared on the same sites (identity over the sites the pair shares; ties to the closest relative genome-wide); bars count masked sequences by the taxon they match best; the tick is the count expected if they matched like the taxon's unmasked sequences; bold: the 5 closest relatives genome-wide
