Wainwright_2012 · Taxon plot

1 of 920 sequences masked (0.1%)

each point represents a single sequence (a single locus in a single taxon), diagonal line is where the observed is the same as the expected divergence

not masked · fails 0 of 5

Wainwright_2012 · Number of sequences masked per locus and per taxon

1 of 920 sequences masked (0.1%)

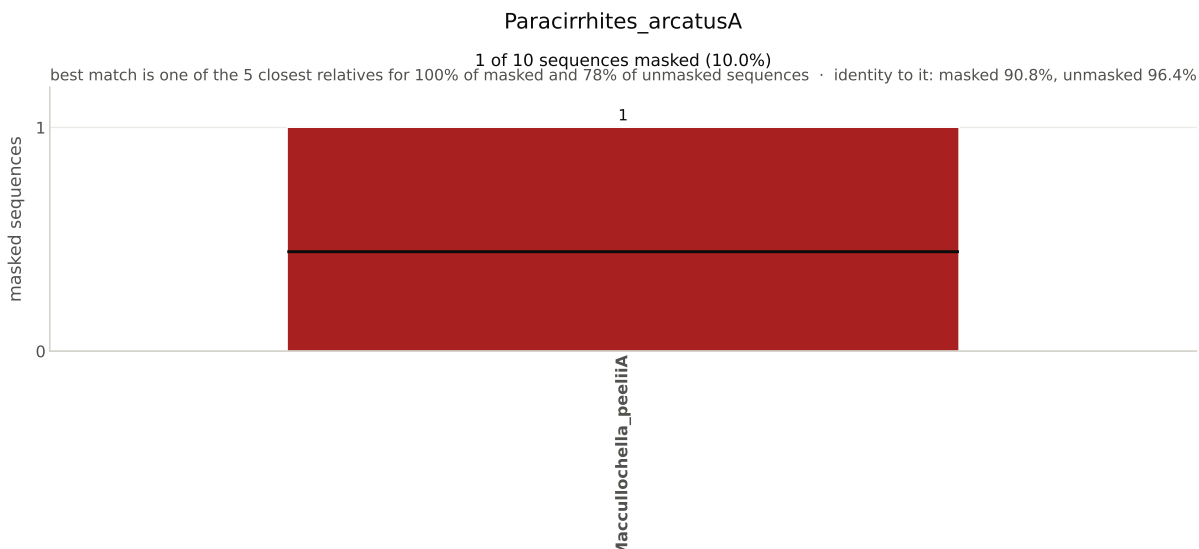

Wainwright_2012 · Best match of each masked sequence

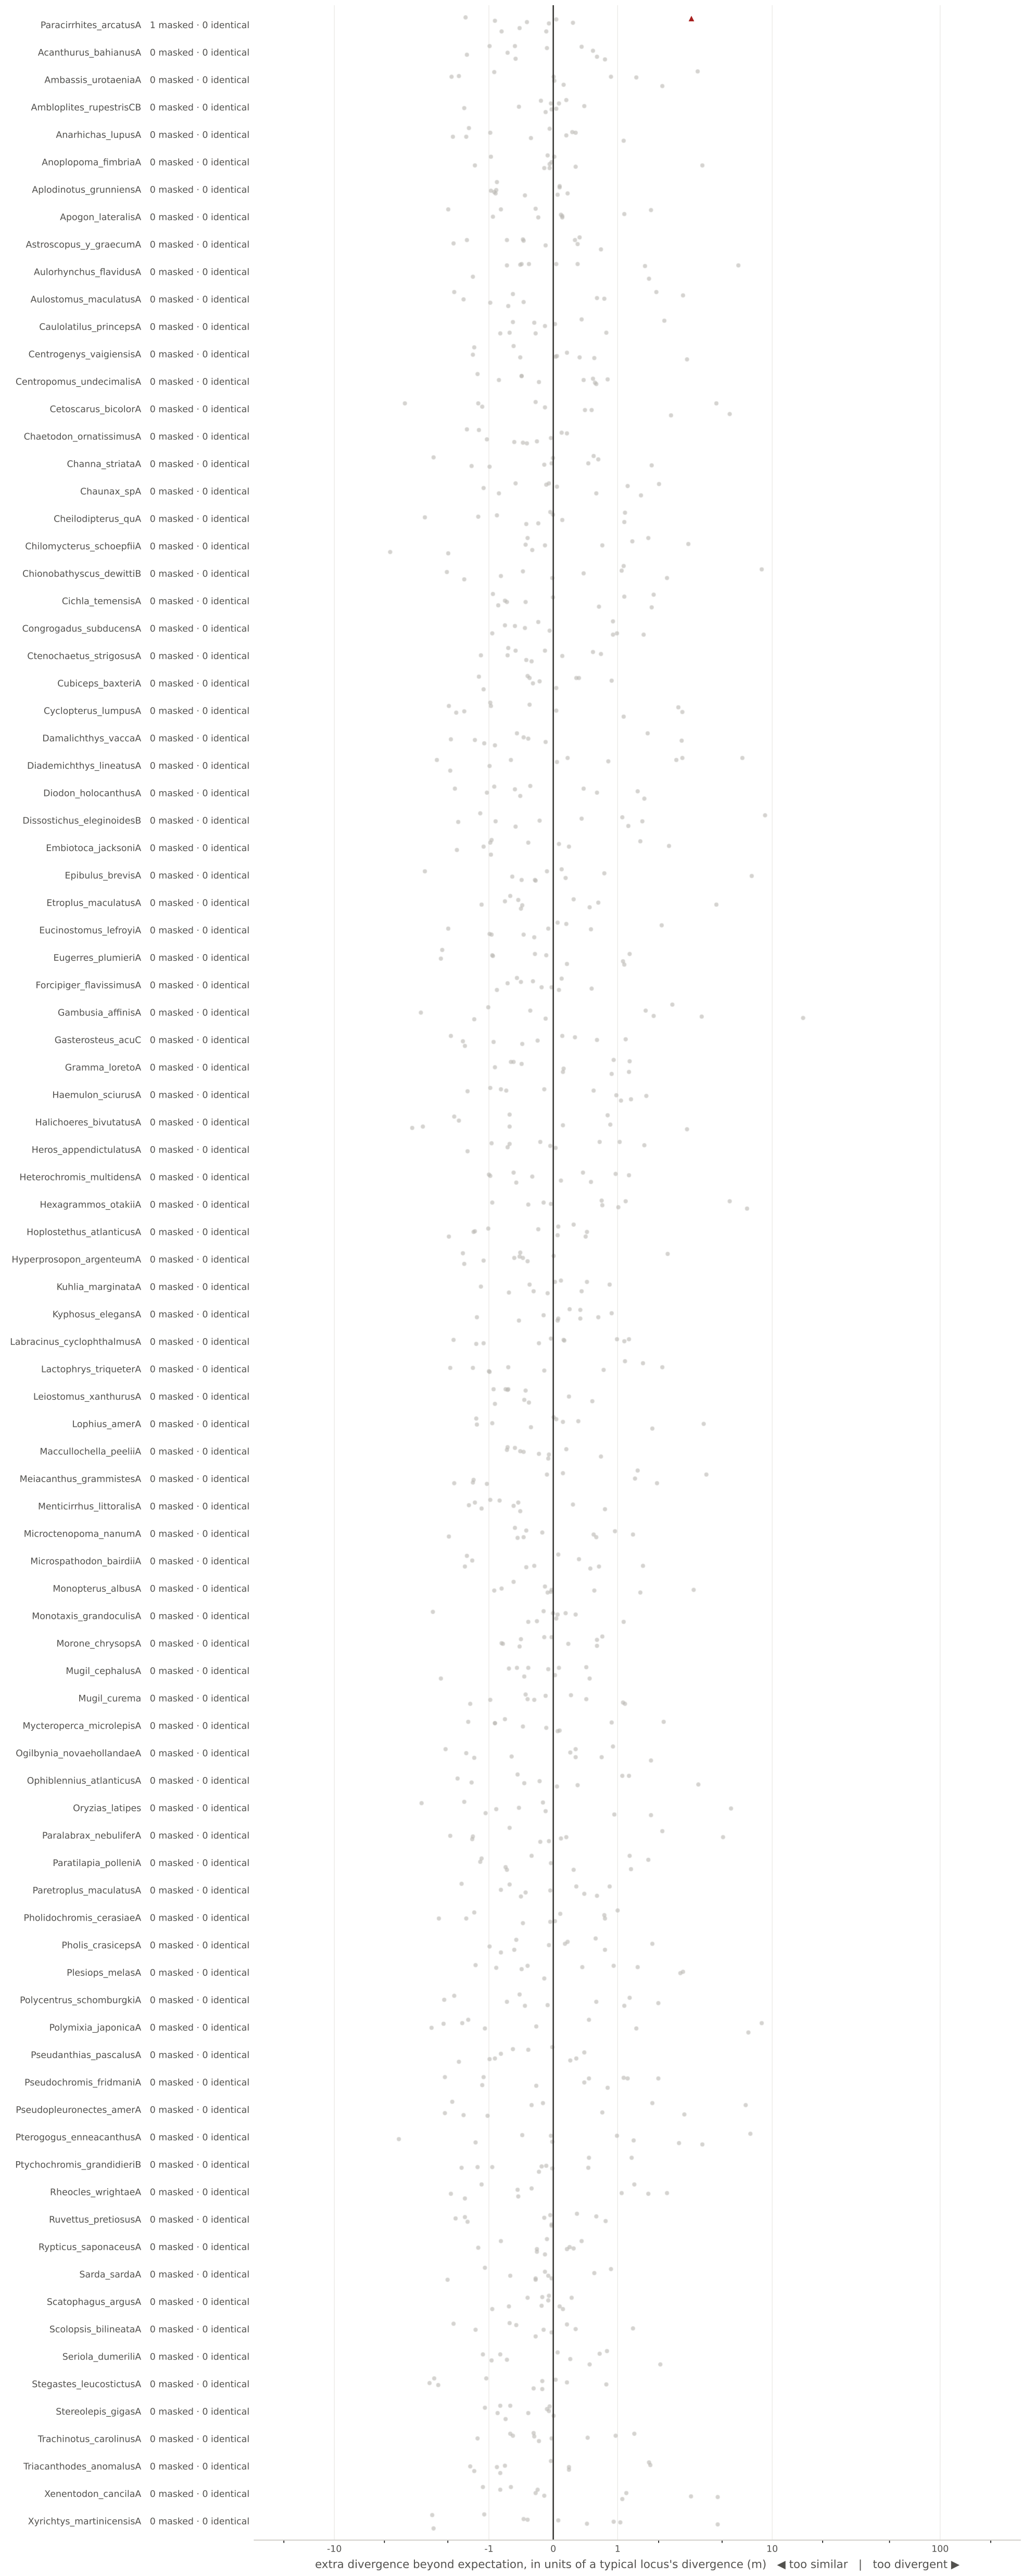

1 of 920 sequences masked (0.1%)

the 1 most masked taxa; a sequence's best match is the taxon closest to it at its locus, per-site divergence compared on the same sites (identity over the sites the pair shares; ties to the closest relative genome-wide); bars count masked sequences by the taxon they match best; the tick is the count expected if they matched like the taxon's unmasked sequences; bold: the 5 closest relatives genome-wide

masked, too divergent · fails 3 of 5
masked, too divergent · fails 4 of 5
masked, too divergent · fails 5 of 5
masked, too similar · 1 pair
masked, too similar · 2 pairs
masked, too similar · 3+ pairs
count expected if the masked sequences matched like the unmasked ones

Wainwright_2012 · Residuals by taxon
1 of 920 sequences masked (0.1%) · all 92 taxa
each point is one sequence; triangles are masked (reds too divergent, blues too similar), grey are the taxon's other sequences
sequences identical to their comparators are counted in the row label, not drawn; axis linear near 0, logarithmic far out

Wainwright_2012 · Residuals by locus
1 of 920 sequences masked (0.1%) · all 10 loci
each point is one sequence; triangles are masked (reds too divergent, blues too similar), grey are the locus's other sequences
sequences identical to their comparators are counted in the row label, not drawn; axis linear near 0, logarithmic far out; shaded = where a saturated sequence would land
